

## Enabling Original Sound on Zoom

Thank you to Yvonne for the following information...

There are 2 ways that I've found to enable original sound.

EITHER

1. From the screen we reach when waiting to be admitted by host, click on Test Computer Audio.

From here click on Advanced at bottom right of screen.

From here tick top option: Show in Meeting Option to Enable Original Sound

Then close this screen and wait to be admitted in normal way.

Once in meeting click on green shield near top of screen. There is a toggle to enable or disable original sound.

OR

2. Once you have joined from the meeting screen itself, next to the microphone bottom left, click on dropdown arrow. Click on audio settings.

Then at bottom right of screen click on Advanced.

Then follow same as option 1 above.

On Sunday we found it better to have Original Sound Enabled for the music. We found it better to turn off Original Sound for speaking.
